GVI will attempt to remedy all defects within a reasonable time.

ROUTINE MAINTENANCE RESPONSIBLE OF PURCHASER:

Trailer axle bearings

Every 6 months or 6000 miles to be regreased or replaced as needed

Drive motor

Chain tension - Tension of chain on main drive motor is inspected weekly ensuring chain is tight and secure, and there is no visual play. Proper tension is required for the system to operate correctly. A loose chain can and will cause the system to jump, slam, and possibly break if not kept snug to the main sprocket.

Mounting brackets

Mounting brackets and bolts are checked weekly along with chain tension ensuring all bolts are fully tightened and not loose.

Belt chain

Chain Tension - Chain tension is inspected weekly to ensure the chain is kept tight, not loose, and has no play. Improper tension of the chain will cause improper unloading and loading of material and can and will result in damaging crossbars/push-off bars.

Chain debris - Chain is inspected weekly for debris and debris removed as needed to ensure proper functionality

Hydraulic System

Hydraulic fluid - Checked weekly to ensure there are no leaks and fluid is added or replaced to the fill line as needed to ensure proper functionality of the rams during operation.

Hydraulic lines - Checked weekly to ensure proper connection and for any damage to lines. Replace as needed.

Door Hinges - Greased monthly as needed.
